Sanlam Lifestage

Mandate description

Sanlam Lifestage is the Fund's trustee approved default investment strategy and aims to meet each member's savings requirement by working towards a target date, which would be the Normal Retirement Age or the Planned Retirement Age (if different).

How Sanlam Lifestage works

The investment strategy consists of two phases and members are automatically switched from one phase to another as they near retirement. The two phases are:

- Accumulation phase
- Preservation phase

As retirement approaches, this target date strategy invests in an investment portfolio matching the member's postretirement needs or plans, but in the years prior to this greater emphasis is placed on achieving capital growth. Members with more than 6 years before reaching their Normal Retirement Age or Planned Retirement Age (if different) are fully invested in the Sanlam Lifestage Accumulation Portfolio which aims to achieve capital growth. Six years (72 months) before a member reaches his/her Normal Retirement Age or Planned Retirement Age (if different), the member is gradually switched from the Sanlam Lifestage Accumulation Portfolio to his/her selected Sanlam Lifestage preservation portfolio by means of 50 monthly switches.

Members with more than 6 years before reaching their Planned Retirement Age are fully invested in Sanlam Lifestage Accumulation Portfolio which aims to achieve capital growth.

Six years (72 months) before a member reaches his/her Planned Retirement Age, the member is gradually switched from the Sanlam Lifestage Accumulation Portfolio to his/her selected Sanlam Lifestage preservation portfolio by means of 50 monthly switches.

Note because the change in lifestage models involved a fundamental change in the investment mandates, this past performance should not be regarded as the back-tested track record of Sanlam Lifestage.
